

# ISO Support Offerings

ISO Standards improve quality, drive growth, cut costs and increase profits. Find the ISO support you need today from University of Wisconsin-Stout Manufacturing Outreach Center (MOC) and Professional Education Programs and Services.

## Internal Auditor

### Implementation Support/Mentoring Option

Your organization's ISO initiatives are supported by an MOC project manager working with an internal project facilitator and the internal auditors group. On site, the MOC project manager will provide a leader/mentor role for the internal audit requirements of the ISO Standard.

## Becoming ISO Certified

### MOC Implementation From Ground Up

With the use of MOC's ISO Assessment, your organization's Quality Management System (QMS) will be evaluated for effectiveness. A comparison (report) and an implementation plan will be prepared. This process is facilitated by an MOC project manager working side-by-side with a company representative.

## Transition Strategies

### MOC Implementation Support Options

- When your organization needs confidence to transition to ISO 9001:2015 standards, the MOC can work with your team to provide facilitation assistance for your organization. Your team can rely on MOC experience to guide the project to completion.
- Similar to our "Ground Up Implementation", MOC can take the primary leadership role in your organization's transition project. This process will be to assess, plan and drive the system improvements to accommodate the ISO 9001 standard.

## ISO Training Opportunities

- **ISO 9001:2015 Transition Strategies for Your Organization**

If you are currently ISO 9001:2008 certified, this session will provide you with an overview of strategies to make the transition to 2015. Our seminar examines suggested guidelines for a phased transition as well as how to implement new procedures and modify existing ones.

- **ISO 9001/13485 Internal Auditor Training**

Our Internal Auditor course is designed to help ISO novices as well as those experienced in auditing or managing the systems. The course will provide a detailed review of the ISO standard requirements and the proof that should be available to the auditor. Attendees will perform practiced audits to learn how to audit, be audited and record the results.
