

Wisconsin
Biogas Council

Advancing Cybersecurity in the Industry, Energy, Water Nexus

WISCONSIN MANUFACTURING
EXTENSION PARTNERSHIP

Conference Overview

The need for cyber security has become increasingly important as more systems and communications rely on internet connectivity and electronic control. The risks, methods of prevention, actions for mitigation, and the path to recovery are shared among all aspects of business and community in Wisconsin. To provide a complete introduction and relevant case studies this conference is providing focused panels on Industry, Energy, Water, and Talent. Each panel has been developed with sector experts including the Mid-West Energy Research Consortium, the NEW IT Alliance, The Water Council, and the Wisconsin Manufacturing Extension Partnership. Regardless of your current status in the path towards becoming prepared for cyber security risks we welcome you to attend, learn, and network.
